

**SOD-523 Single Line TVS Diode for ESD Protection****Description**

TVS diodes are designed to replace multilayer varistors (MLVs) in portable applications such as cell phones, notebook computers, and PDA's. They offer superior electrical characteristics such as lower clamping voltage and no device degradation when compared to MLVs.

The UMD08-523 is a Uni-Directional TVS that is designed to provide high overvoltage protection by clamping action and have instantaneous response to transient overvoltages. The SOD-523 is a very small package which allows space saving on high density printed circuit board and also gives the designer the flexibility to protect one line in applications where arrays are not practical.

**Features**

- \* Solid-state silicon avalanche technology
- \* SOD-523 package
- \* Uni-Directional protection
- \* Protects one I/O or Power line
- \* 150 Watts peak pulse power ( $t_p = 8/20\mu s$ )
- \* Working voltage: 8V
- \* Low clamping factor  $V_{cl}/V_{br}$
- \* Low leakage current
- \* Full RoHS compliance
- \* Complies with the following standards:
  - IEC 61000-4-2 (ESD) Air-15kv, Contact-8kv
  - IEC 61000-4-4 (EFT) (5/50ns)
  - IEC 61000-4-5 (Surge) (8/20 $\mu s$ )

**Small Surface Mount Device TVS****SOD-523 Pin Configuration**

<u>Pin</u>	<u>Description</u>
1	Cathode
2	Anode

**Mechanical Characteristics**

- \* Molded SOD-523 package
- \* Weight 2 milligrams (Approximate)
- \* Available in Lead-Free Pure-Tin Plating
- \* Solder Reflow Temp: Pure-Tin (Sn), 260-270°C
- \* Consult Factory for Leaded Device Availability
- \* Flammability Rating UL 94V-0
- \* 8mm Tape and Reel per EIA Standard 481
- \* Device Marking: Marking Code,  
Pin one defined by Polarity Band

**Applications**

- \* Cellular Handset
- \* PDA
- \* Notebook
- \* Digital Camera
- \* Wifi Phone

**SOD-523 Single Line TVS Diode for ESD Protection**
**Absolute Maximum Ratings @ 25°C unless otherwise specified**

Parameter	Symbol	Value	Units
Peak Pulse Power; pulse waveform = 8/20μs	P <sub>pp</sub>	150	W
Peak Pulse Current; pulse waveform = 8/20μs	I <sub>pp</sub>	9	A
ESD per IEC 61000-4-2 (Air)	V <sub>pp</sub>	±15	kV
ESD per IEC 61000-4-2 (Contact)		±8	
Operating Temperature	T <sub>j</sub>	-55 to 125	°C
Storage Temperature	T <sub>stg</sub>	-55 to 150	°C

**Electrical Characteristics @ 25°C unless otherwise specified**

Parameter	Symbol	Conditions	Minimum	Typical	Maximum	Units
Stand-off Voltage	V <sub>wm</sub>				8.0	V
Breakdown Voltage	V <sub>br</sub>	I <sub>t</sub> =1mA	8.4	9.2	9.9	V
Leakage Current	I <sub>r</sub>	V <sub>wm</sub> =8V, T=25°C		0.1	1	μA
Clamping Voltage	V <sub>c</sub>	I <sub>pp</sub> =1A T <sub>p</sub> =8/20μs		12.5		V
Clamping Voltage	V <sub>c</sub>	I <sub>pp</sub> =9A T <sub>p</sub> =8/20μs		16.0	18.0	V
Peak Pulse Current	I <sub>pp</sub>	T <sub>p</sub> =8/20μs			9	A
Junction Capacitance	C <sub>j</sub>	V <sub>r</sub> =0V, f=1MHz		40		pF

Applications Information

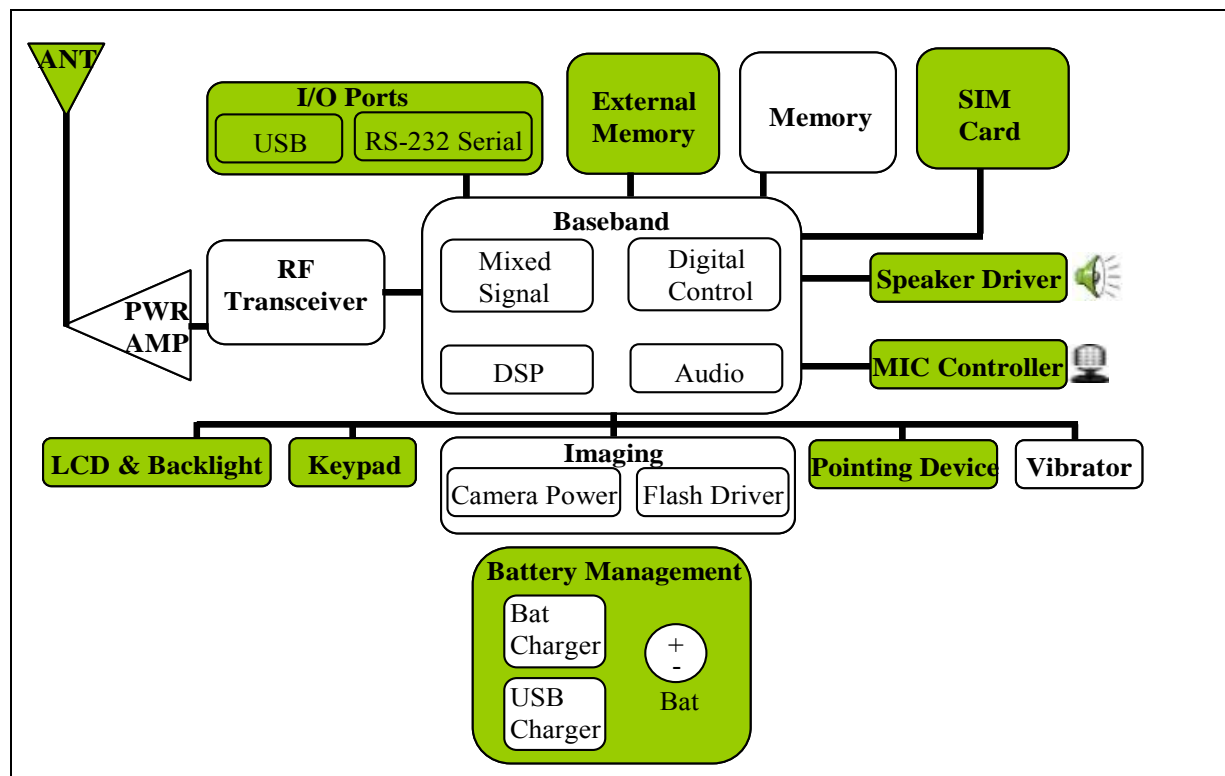

The UMD08-523 is designed to protect one data, I/O, or power supply line. The device is Uni-directional and may be used on lines where the signal polarity is above ground. The cathode pin should be placed towards the line that is to be protected. Each device requires less than 1.5mm<sup>2</sup> of PCB area

Circuit connectivity is as follows:

- Line 1 is connected to Pin 1
- Pin 2 is connected to Ground

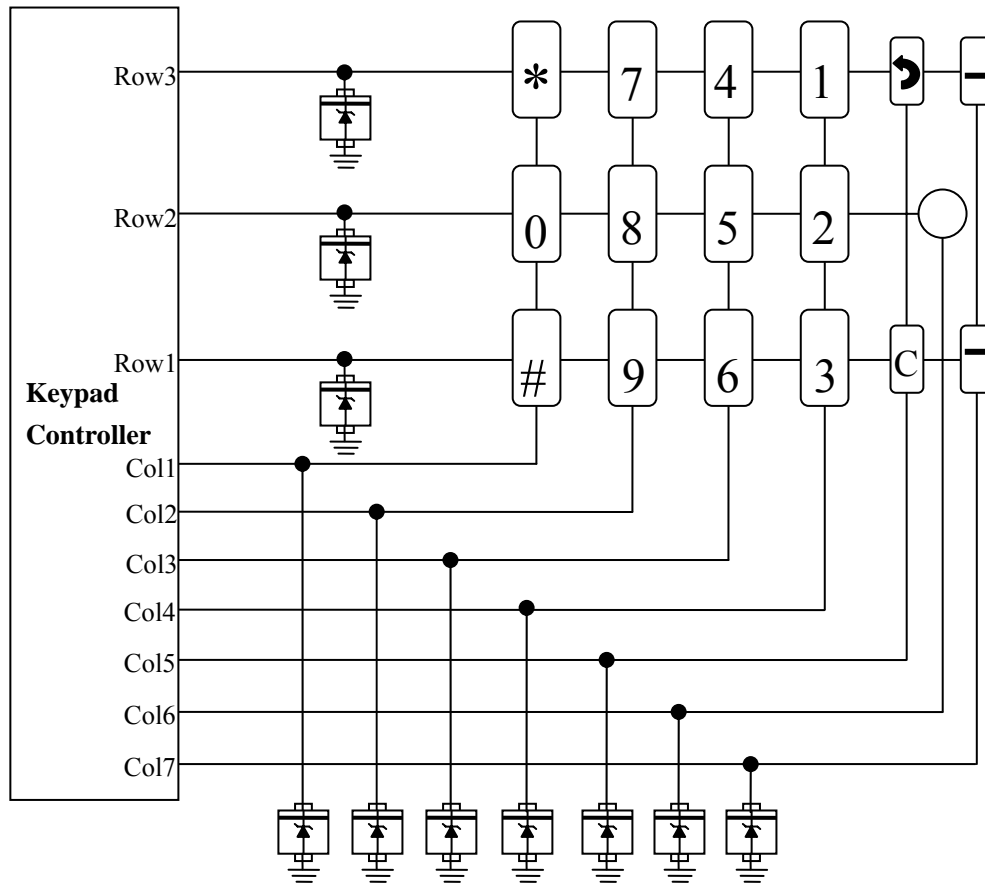

Mobile Handset Block Diagram

Areas that require ESD protection are highlight in green.

**Circuit Board Layout Recommendations**

Good circuit board layout is critical for creating an effective surge suppression circuit. The following PCB guidelines are recommended to enhance the performance of a TVS device:

- Place the TVS near the input terminals or connectors to restrict transient coupling.
- Minimize the path length between the TVS and the protected line.
- The ESD transient return path to ground should be kept as short as possible.
- Place a TVS and decoupling capacitor between power and ground of components that may be vulnerable to electrostatic discharges to the ground plane.
- Minimize all conductive loops including power and ground loops.
- Use multilayer boards when possible.
- Minimize interconnecting line lengths.
- Never run critical signals near board edges.
- Fill unused portions of the PCB with ground plane.

**Matte Tin Lead Finish**

Matte tin has become the industry standard lead-free replacement for SnPb lead finishes. A matte tin finish is composed of 100% tin solder with large grains. Since the solder volume on the leads is small compared to the solder paste volume that is placed on the land pattern of the PCB, the reflow profile will be determined by the requirements of the solder paste. Therefore, these devices are compatible with both lead-free and SnPb assembly techniques. Unlike other lead-free compositions, matte tin does not have any added alloys that can cause degradation to solder joint.

**SOD-523 Single Line TVS Diode for ESD Protection**
**Soldering Method for UMD's Products**

1. Storage environment: Temperature = 10°C~35°C Humidity = 65%±15%
2. Reflow soldering of surface-mount devices

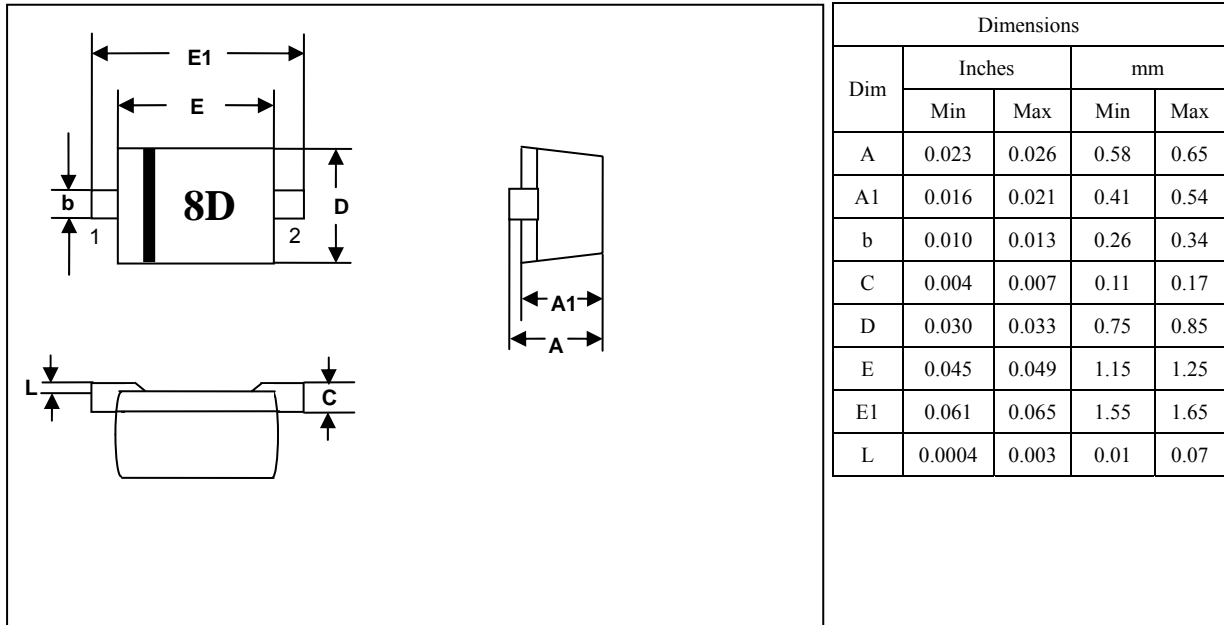

Profile Feature	Pb-Free Assembly
Average ramp-up rate (TL to TP)	<3°C/sec
Preheat	
- Temperature Min (T <sub>Smin</sub> )	150°C
- Temperature Max (T <sub>Smax</sub> )	200°C
- Time (min to max) (t <sub>s</sub> )	60~180sec
T <sub>Smax</sub> to TL	
- Ramp-up Rate	<3°C/sec
Time maintained above:	
- Temperature (TL)	220°C
- Time (t <sub>L</sub> )	50~145sec
Peak Temperature (T <sub>P</sub> )	260°C +0/-5°C
Time within 5°C of actual Peak Temperature (t <sub>p</sub> )	20~40sec
Ramp-down Rate	<6°C/sec
Time 25°C to peak Temperature	<8 minutes

**Flow (wave) soldering (solder dipping)**

Products	Dipping time
Pb devices	5sec±1sec
Pb-Free devices	5sec±1sec
